Research:

Write down the urls of three websites you looked at to research layout for the type of site you are creating. For example, if I was creating an auction website, I might look at pages on https://www.ebay.com/.

url1	https://www.site1.com/
url2	https://www.site2.com/
url3	https://www.site3.com/

Wireframes:

Use MockFlow or another diagraming software to create layouts for your pages. Consider the following:

- 1. Where is your navigation going to be located on every page.
- 2. Will you need a footer?
- 3. How can you make a layout that is visually interesting and helps communicate your site content?
- 4. Don't forget you must have at least 2 distinctly different page layouts.
